RESPONSE TO INTERVIEW SUMMARY

Sir:

This is a statement of the substance of the interview held on October 4, 2005, and is in response to the Interview Summary mailed October 13, 2005.

REMARKS

The undersigned presented arguments that the claims are patentable since they are quite similar to the claims deemed to comply with 35 USC 101 in *Arrhythmia Research Technology, Inc. v. Corazonix Corp.*, 22 U.S.P.Q. 2d, 1033. The Examiners responded that there must be some type of transformation outside the computer, and that the "converting of signals" qualifies the claims in *Arrhythmia* as statutory, as the distinction between the claims in *Arrhythmia* compared to the claims in this application. I also argued that Scherer does not teach or suggest

- 1 of 2 -

the limitation that parameters are adjusted to be substantially independent of scatter values of the genes over the sets, where the scatter values are defined in the specification. The Examiners responded that they interpret the term "scatter values" very broadly so as to encompass the background noise in Scherer, and the normalization process reads on the adjusting feature.

The conclusions reached in our telephone interview are set forth in the interview summary sent by Examiner Clow on October 13, 2005, and is not repeated here. The undersigned agrees with the conclusions stated in Examiner Clow's summary.

Respectfully submitted,

James S. Hsue
